

MicroPower Technologies

Changing what's possible

COMPANY OVERVIEW

Established in 2008, MicroPower Technologies was founded on the idea that wireless surveillance could be cost effective, easy-to-deploy, secure and highly reliable. The company's innovative research and development team designed a comprehensive surveillance system that redefines the market through its use of intelligent algorithms that enhance video quality and reliability, while maximizing cost effectiveness. Its flagship product, the Rugged-i™ wireless video camera, incorporates advanced software and ultra-low power wireless technologies to eliminate data and power cables. The company has won numerous awards for its advanced technologies including Security Product of the Year 2011 from Security Products Magazine and Top 30 Innovations of 2011 from Security Sales & Integration Magazine.

THE PRODUCTS

The MPT2500 Rugged-i wireless video camera is a breakthrough product in the family of camera and video hub solutions from MicroPower Technologies. The camera incorporates disruptive, ultra-low power wireless technologies that eliminate data and power cables. Solar cells power the camera for outdoor applications and provide around-the-clock video surveillance system operation.

The MPT2700 MiniHub is an indoor central hub for use with MicroPower Technologies' line of wireless video cameras. It is a high-performance, reliable and easy to install base station which connects wired Ethernet to wireless remote cameras, such as the MPT2500 Rugged-i.

MARKETS

Because MicroPower's products do not require wires for operation, a new host of customer applications have become possible. MicroPower products are in use by customers in the commercial, border protection, government, retail, education and public utility markets. Products are marketed worldwide and are available through channel distribution.
